CPH BANK

HIGH AVAILABILITY WITH A CONTROLLED BUDGET

CHP Bank’s biggest branches are connected to the MPLS VPN thanks to both coaxial and DSL links. Each link has its own purpose (VPN or Internet traffic). On top of that, both lines back each other up.

We have optimised access to business-critical information and to the Internet for all our teams. Employees now comply with the processes established by IT. A high-performance network, without any congestion or security problems: day in, day out, this is reflected in higher productivity.
Philippe Maes, IT Director

With some thirty offices and a workforce of more than 200 people, CPH Bank presents itself as a local bank on your doorstep. This strategy that is closely linked to “small is beautiful” was adopted in 1994 and has brought tremendous uninterrupted success up to the current day. More than 80 years after being established, the ideal of the founders of CPH are still expressed thanks to all the tools of a highly modern bank.

THE NEEDS

- Manage access through operator-independent IP ranges
- Increase site availability
- Adapt bandwidth to traffic type
- Enhance security management for online usage by employees

THE SOLUTION

- Private MPLS network based on 2 separate links per site
- DSL with traffic prioritization
- Coaxial link for Internet
- Mutual SDSL and coaxial back-up (dual operators)
- Firewall cluster solution housed at Win Data Center

THE RESULTS

- Guaranteed upload and download bandwidth for business-critical apps
- High-capacity download link for Internet, with no impact on business app performance
- No more high-volume Internet traffic passing through central site security devices
- Increased employee satisfaction and productivity
- Increased application of IT policies
